INTERNATIONAL PRELIMINARY EXAMINATION REPORT - SEPARATE SHEET

International application No. PCT/IN2003/000416

Re Item V

Reasoned statement with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

- 1. Reference is made to the following documents:
 - D1: WO 03/066567 A (NEO ENERGY KOREA CO LTD; YOO JEONG-WOO (KR)) 14 August 2003 (2003-08-14)
 - D2: PATENT ABSTRACTS OF JAPAN vol. 1996, no. 03, 29 March 1996 (1996-03-29) -& JP 07 310090 A (TENSEI SEIYU KK), 28 November 1995 (1995-11-28)
 - D3: CHAI HON YEAN ET AL.: "Studies on the transesterification of glycerides: I: The methanolysis of tripalmitin catalysed by diorganotin (IV) compounds" APPLIED ORGANOMETALLIC CHEMISTRY, vol. 14, no. 6, 2000, pages 304-315, XP008032116 GBHARLOW
 - D4: G. ANTOLIN ET AL.: "Optimisation of biodiesel production by sunflower oil transesterification" BIORESOURCE TECHNOLOGY., vol. 83, no. 2, 2002, 2002 pages 111-114, XP002286047 GBELSEVIER.
 - D5: US-A-5 525 126 (BASU HEMENDRA N ET AL) 11 June 1996 (1996-06-11)
- 2. The present application does not meet the criteria of Article 33(1) PCT, because the subject-matter of claims 1-11 does not involve an inventive step in the sense of Article 33(3) PCT.

The document D1 discloses a process for producing fatty acid alkyl esters suitable for use as a biodiesel. The process steps consist of reacting glycerides with lower alcohols at a ratio of 1:6-60 in the presence of an (0.1-10%) organometallic tin catalyst at 1-10 bar and 60-150°C. The so-obtained glyceride is washed and separated in a separating tower (see D1: as cited in the search report). It would appear that with the exception of the decantation step which is a known alternative, all of the process parameters of claim 1 are disclosed in the document D1. Therefore, it would seem that the process of claim 1 is merely a variation on similar processes and a selection of parameters which are known in the art. Moreover, the claims currently on file do not attempt to distinguish themselves from the molar ratios and catalysts disclosed in the prior art. For these reasons, inventivity can not be acknowledged.

In addition, claims 2-11 do not appear to contain any subject-matter which might contribute to an allowable claim as they relate to features which have already been used for similar purposes in similar processes as is evidenced by the teaching of the documents D2-D5, taken in their entirety.

PCT/ IN 03/00416

CLEAR VERSION

RSION

29 JUN 2006

We claim

- 1. An improved process for the preparation of fatty acid alkyl esters suitable for use as biodiesel, said process comprises the steps of,
 - a. reacting fatty acid glycerides with an alcohol having 1-4 carbon atoms in the molar ratio of 3:1 to 30:1 of fatty acids and triglycerides respectively, at a temperature ranging between 70-300°C, pressure in the range of 1-30 bar, in presence of a organometalic catalytic compound of Tin with concentration of catalyst is in the range of 0.01 to 3 weight percent of the fatty acid glycerides;
 - b. obtaining ester with glycerol;
 - separating the glycerine from the fatty acid alkyl ester as immiscible phase by decantation;
 - d. purifying the fatty acid alkyl esters by washing with water, and
 - e. washed ester is treated with an basic adsorbent to obtain biodiesel.
- 2. A process as claimed in claim 1, wherein fatty acid glycerides are selected from the group consisting of vegetable oil, animal oil, fatty acids and mixture thereof.
- A process as claimed in claim 1, wherein the adsorbent is selected from the group consisting of bauxite, alumina, silica-alumina and distillation or combinations thereof.
- 4. A process as claimed in claim 1, wherein the catalyst is selected from the group comprising of dibutyl tin oxide and dicotyl tin oxide.
- 5. A process as claimed in claim 4, wherein the use of catalyst is for the preparation of fatty acid alkyl esters which is suitable for use as biodiesel.
- 6. A process as claimed in claim 1, wherein the preferred temperature of the reaction is in the range of 150-200 °C
- 7. A process as claim 1, wherein the treatment with adsorbent is carried out at 20-60°C.

AMMENDED CLAIMS ART.34

AMENDED SHEET

BEST AVAILABLE COPY

- BEST AVAILABLE COPY
- 8. A process as claimed in claims 1, wherein the excess alcohol is recovered and recycled.
- 9. A process as claimed in claim 1, wherein the biodiesel obtained has an acid value in the range of 0.01-0.50 mg KOH/g.
- 10. A process as claimed in claims 1, wherein the biodiesel obtained has viscosity in the range of 4-7 cSt at 40 °C.
- 11. A process as claimed in claims 1, wherein the fatty acid alkyl esters produced are suitable for use as fuel in diesel engines, blending component for petrodiesel and as additive in petrofuel for enhancing lubricity, cetane number and biodegradability.

AMMENDED CLAIMS ART.34
